

Contents

1. Introduction	1
1.1. Motivation	1
1.2. Hypothesis of this PhD study.....	2
2. Literature Review	3
2.1. Engineering principles of material development	3
2.1.1. Damage prevention	3
2.1.2. Damage management through self-healing materials	4
2.1.3. Self-healing materials from fabrication to application	5
2.2. Shape memory alloys.....	6
2.2.1. Characteristics of shape memory alloys	7
2.3. NiTi shape memory alloys	8
2.3.1. Phase diagram	8
2.3.2. Crystallographic structures	10
2.3.3. Crystallographic theory of martensitic transformation.....	10
2.3.4. Shape memory effect and superelasticity	11
2.3.5. Applications of NiTi shape memory alloys.....	13
2.4. Thin film deposition process	13
2.4.1. Physical vapor deposition by sputtering	14
2.4.2. DC-Glow Discharge Sputtering	17
2.4.3. Radio Frequency (RF) Sputtering	17
2.4.4. Magnetron sputtering.....	18
2.4.5. Balanced/normal and unbalanced magnetron sputtering	18
2.4.6. Close-field unbalanced magnetron sputtering	19
2.5. Cavitation.....	20
2.5.1. Mechanism of cavitation erosion.....	21
2.5.2. Evaluation of cavitation erosion	22
2.5.3. Materials characteristics to inhibit cavitation erosion damage	23
2.5.4. Surface coating characteristics to inhibit cavitation erosion damage	24
3. Experimental Details	25
3.1. Substrates.....	25

3.2. Plasma nitriding	25
3.3. Deposition of Magnetron sputtered PVD coatings	26
3.3.1. Deposition of NiTi coatings	28
3.3.2. Deposition of TiCN hard coatings	28
3.3.3. Deposition of composite bilayer NiTi/TiCN coatings.....	28
3.4. Coating characterization techniques.....	29
3.4.1. Morphology and composition	29
3.4.2. Microstructure	29
3.4.3. Phase transformation analysis.....	29
3.4.4. Nanoindentation	30
3.4.5. Ball-on-disc	30
3.4.6. Scratch test	30
3.4.7. Cavitation erosion testing	31
4. Results.....	32
4.1. Development of NiTi thin films by finding a suitable annealing technique	32
4.1.1. Composition and microstructure	32
4.1.2. Phase transformation	37
4.1.3. Nanoindentation	38
4.1.4. Adhesion	40
4.1.5. Wear	43
4.1.6. Conclusion	47
4.2. Development of NiTi thin films by finding an optimum in-situ annealing temperature	48
4.2.1. Morphology and composition of thin films	48
4.2.2. Crystalline structure of thin films	50
4.2.3. TEM	52
4.2.4. Phase transformation analysis of thin films	57
4.2.5. Nanoindentation	60
4.2.6. Adhesion	61
4.2.7. Wear	63
4.2.8. Conclusion	66
4.3. Development of NiTi thin films by finding the most suitable sputtering targets	67

4.3.1. Composition adjustment of NiTi thin films	67
4.3.2. Morphology of NiTi thin films	69
4.3.3. Crystalline structure of NiTi thin films	70
4.3.4. Phase transformation behavior of NiTi thin films	72
4.3.5. Nanoindentation analysis of NiTi thin films	74
4.3.6. Wear behavior of NiTi thin films	74
4.3.7. Adhesion of NiTi thin films to the substrates	76
4.3.8. Conclusion	77
4.4. Development of NiTi thin films based on the composition	78
4.4.1. Morphology and microstructure analysis	78
4.4.2. Phase transformation analysis	80
4.4.3. Nanoindentation analysis	81
4.4.4. Wear resistance analysis	82
4.4.5. Coating adhesion analysis	83
4.4.6. Conclusion	86
4.5. Development of TiCN hard coatings	87
4.5.1. Composition and microstructure	87
4.5.2. Tribo-mechanical behavior	92
4.5.3. Adhesion	95
4.5.4. Conclusion	98
4.6. Designing self-healing coating architecture	99
4.6.1. Morphology and microstructure	99
4.6.2. Self-healing capability	101
4.6.3. Tribological behavior	104
4.6.4. Conclusion	106
4.7. Deposition of self-healing composite NiTi based coatings	107
4.7.1. Microstructure	108
4.7.2. Tribo-mechanical behavior	109
4.7.3. Adhesion	113
4.7.4. Conclusion	115
4.8. Application capability of developed self-healing composite NiTi based coatings	116

4.8.1. Cavitation resistance	116
4.8.2. Surface morphology analysis.....	119
4.8.3. Conclusion	124
5. Summary	125
6. Outlook	126
